

Steel Blind Rivet with Dome Head

This steel blind rivet is engineered with a dome head for robust and lasting connections. It is ideal for hydraulic machinery and various industrial applications, ensuring secure fastening.

Product Overview

High-Strength Steel Blind Rivet

This dome head blind rivet is engineered for high-performance fastening in industrial environments. Crafted from durable steel, it creates secure, permanent joints across a variety of materials. Its design features a cylindrical body and a flared head, specifically optimized to resist pull-out forces and ensure long-term structural integrity in demanding applications like hydraulic machinery.

Technical Specifications

Key Features

- High pull-out resistance
- Durable steel construction
- Secure cylindrical body design
- Flared dome head

Head Style	Dome Head
Material	Steel
Common Applications	Hydraulic Machinery, Industrial Assembly, Metal Fastening
