

Steel Chain Sling for Lifting

This high-strength steel chain sling is designed for lifting and rigging applications. It features durable construction with heat-treated alloy steel chains and forged steel components.

Overview

Professional Lifting Solution

This high-strength steel chain sling is engineered for demanding lifting and rigging applications across industrial and construction sectors. Constructed from heat-treated alloy steel with robust forged components, it ensures maximum durability and reliability under load. Designed to meet stringent safety standards, this sling provides a secure and efficient solution for heavy-duty material handling tasks.

Technical Specifications

Material	Heat-treated alloy steel
Component Construction	Forged steel
Primary Applications	Lifting, Rigging, Industrial, Construction

Compliance

Safety Compliance
Industry Standard Compliant
