

# Steel Coil Straightening and Cutting Machine

This straightening and cutting machine is designed for processing steel coils. It utilizes rollers to straighten the material and a cutting mechanism to produce sheets or blanks of desired lengths.

## ADDITIONAL IMAGES

## Product Overview

### High-Precision Steel Coil Processing

This high-precision straightening and leveling machine is engineered for efficient steel coil processing. It integrates advanced traction and leveling capabilities through a robust roller system designed for long-term industrial service. Featuring an automated PLC control system and hydraulic operation, this machine ensures consistent accuracy and ease of use in cutting and straightening applications.

## Technical Specifications

### Processing Speed

**15 m/min**  
Max Speed

### Working Material Thickness

1.5 mm

### Electrical Requirements

415V, 50HZ, 3 Phase

## Mechanical Components

### Hydraulic Motor Power

5.5 KW

### Straightening Rollers

4

### Shaft Material

#45 Heat Treated Steel

### Blade Material

GCr12

## Features

### Control System

PLC Integrated • Hydraulic Lifting • Hard Chromium Plated Rollers

### Decoiler Capacity

5 T
