

Steel Plate Radiator

This radiator is made from steel plate for efficient heat transfer. It is suitable for various heating applications in industrial and commercial settings.

Product Overview

High-Efficiency Steel Plate Radiator

This advanced steel plate radiator is engineered for durability and superior thermal performance using high-quality cold-rolled low carbon steel. Its ultra-thin, contracted design integrates seamlessly into modern interiors while providing an energy-efficient heating solution. Designed for reliability and longevity, this product offers an excellent balance of cost-effectiveness and high heat output to suit various national heating systems.

Technical Specifications

Rated Heat Output

1338 W

Heat Output

Model Dimensions

600 x 1000 mm

Material

ST13 Cold-rolled low carbon steel

Product Benefits

Advantages

Energy-saving, Ultra-thin profile, High durability, Cost-effective, Reliable manufacturing
