Product Overview

Professional Steel Roof Tile Forming

This high-performance steel roof tile forming machine is designed for efficient, consistent, and precise metal roofing production. It features robust construction with a user-friendly PLC interface and hydraulic systems for high-volume manufacturing. Built for durability, it supports pre-painted and galvanized steel coils, ensuring high-quality outputs for industrial building material applications.

Technical Specifications

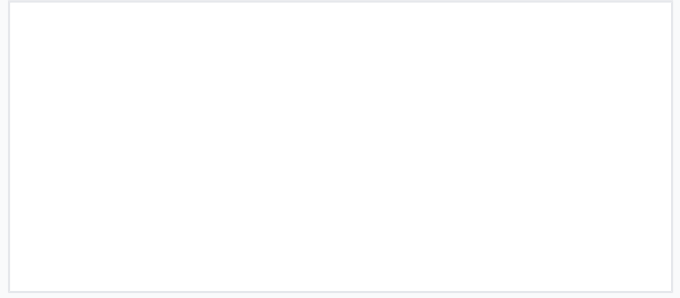

Material Specifications

Parameter	Value
Compatible Material	Pre-painted & galvanized steel coil
Thickness	0.3-0.6 mm
Yield Stress	Q235-345 Mpa

Performance Metrics

6 m/min Max Forming Speed	5.5 KW Main Motor Power	12 Mpa Hydraulic Pressure
-------------------------------------	-----------------------------------	-------------------------------------

Construction & Control

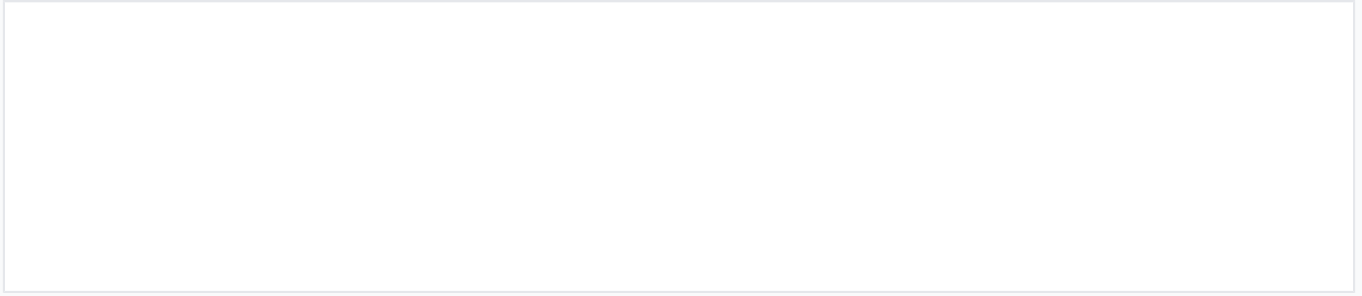

Roller Specifications

- Material: #45 steel
- Treatment: Hard chrome treatment
- Transmission: Chain transmission

Control System

PLC Controller, Touch Screen, Button Operation

Physical Dimensions

Dimensions & Weight

- L*W*H: 8000*1500*1500 mm
- Approximate Weight: 8000 KG
