

Steel Sanding Flap Disc

Sanding flap discs are used for grinding, blending, and finishing steel and other materials. The overlapping abrasive flaps wear away during use, exposing fresh material for consistent performance.

Product Overview

Professional Abrasive Solution

These sanding flap discs are engineered for versatile material removal and surface finishing. Utilizing overlapping abrasive flaps, the disc consistently exposes fresh abrasive material during use, ensuring a uniform finish and extended tool life. This high-performance tool is ideal for demanding applications in metalworking, construction, and automotive industries.

Country of Origin

China

Application Compatibility

Primary Applications

- Weld removal
- Deburring
- Surface preparation
- Polishing
- Grinding

Suitable Materials

Ferrous Metals, Non-Ferrous Metals, Plastics, Soft Woods, Hard Woods

Safety & Compliance

Mandatory Safety Gear

- Eye protection
- Ear protection
- Dust protection

Usage Warnings

Use with angle grinders • Keep away from children • Wear protection at all times
