

Steel Strip Hydraulic Bending Machine

This hydraulic bending machine is designed for precision forming of steel strips. It features a robust construction for stability and durability, ensuring accurate and consistent bending results.

ADDITIONAL IMAGES

Overview

Industrial Hydraulic Bending Machine

This high-performance hydraulic bending machine is engineered for precision forming of steel strips in demanding industrial environments. Featuring a robust, stable construction, it ensures consistent results for various metalworking tasks including bending, folding, and straightening. The system integrates advanced hydraulic controls and safety mechanisms, making it an essential asset for professional metal fabrication facilities.

Performance Specifications

Key Performance Metrics

3000 KN

Maximum Bending Force

18.5 kW

Maximum Power

6000 mm

Max Work Table Length

Model Specifications

Model	Pressure (KN)	Table Length (mm)	Weight (kg)
63t/2500	630	2500	4200
100t/3200	1000	3200	6400
200t/5000	2000	5000	15500
250t/6000	2500	6000	27000

Operational Features

Safety Features

Emergency Stop • Protective Guards • Hydraulic Safety

Processing Capabilities

Bending, Folding, Straightening, Leveling, Hydraulic Power
