

Steel Strip Rust and Scale Removal Line

This steel strip pickling line efficiently removes scale and rust from steel strips. It incorporates a series of processing tanks, chemical treatments, and material handling equipment for high-volume cleaning.

Product Overview

Industrial Steel Strip Pickling Line

This industrial-grade steel strip pickling line is engineered for the continuous removal of scale and rust from steel surfaces. The system integrates advanced chemical treatment tanks with robust material handling equipment to ensure consistent, high-volume production. It is designed to optimize surface quality, making it an essential asset for steel processing facilities focused on efficiency and durability.

System Capabilities

Production Capacity

High-Volume

Process Type

Continuous Pickling

Primary Function

Scale Removal, Rust Removal, Surface Preparation

Technical Features

System Components

- Processing Tanks
- Chemical Treatment Systems
- Material Handling Equipment
