Product Overview

Heavy-Duty Machinery Moving Solution

These steerable machinery moving skates are engineered for the safe and efficient transport of heavy equipment and large industrial objects. Featuring a low-profile design and durable steel construction, they provide exceptional stability and maneuverability in tight industrial environments. The integrated rotating top plate allows for precise positioning, while the high-quality polyurethane wheels ensure smooth operation without marking floors.

Key Features

Floor Protection

Non-marking wheels • Low-profile design

Construction Material	Powder-coated steel
-----------------------	---------------------

Wheel Material	Polyurethane
----------------	--------------

Steering	Yes
