

Steering Idler Arm Assembly

This steering idler arm assembly offers support and pivot for a vehicle's center link. Its robust construction ensures controlled movement, translating steering input into accurate wheel positioning.

Product Overview

Steering Idler Arm Assembly

This steering idler arm assembly is a vital component in a vehicle's steering system, engineered to provide essential support and pivot for the center link or intermediate rod. Designed for precision and reliability, it maintains proper steering alignment and helps translate driver inputs into accurate wheel positioning. With its robust, wear-resistant construction, this assembly is built to withstand rigorous use while enhancing overall vehicle handling and safety.

Technical Specifications

Key Features

- Provides smooth and precise steering
- Maintains proper steering linkage alignment
- Reduces wear on connected steering components
- Robust, corrosion-resistant construction
- Secure frame mounting points

Application

Steering System, Vehicle Handling, Steering Linkage Support
