

Steering Idler Arm

This steering idler arm is a crucial component in a vehicle's steering system, providing support and pivot for the center link. It is constructed from durable materials for long-lasting performance and features mounting points for secure attachment.

Product Overview

High-Performance Steering Idler Arm

This steering idler arm is a vital component in the vehicle steering system, engineered to provide essential support and pivot functionality for the center link. It plays a critical role in maintaining optimal steering geometry to ensure responsive and smooth handling. Constructed from high-durability materials and finished with a corrosion-resistant coating, this part is designed for longevity and reliable performance under demanding driving conditions.

Technical Specifications

Design Features

- Corrosion-resistant protective finish
- Engineered for precise steering geometry
- Heavy-duty wear-resistant construction
- Secure mounting points for frame attachment

Component Type

Steering System • Suspension Component • Linkage Support
