

Stereo Speaker System with Wired Connection

This stereo speaker system is compact and versatile, designed for clear audio reproduction. It features a dual-driver configuration within a rectangular enclosure and connects via a wired interface for reliable signal transmission.

Product Overview

Professional Audio Reproduction

This stereo speaker system is engineered to provide clear, reliable audio performance for professional environments. Featuring a dual-driver configuration, the system is housed in a robust rectangular enclosure designed for optimal signal transmission. Its wired connection interface ensures consistent, latency-free sound, making it an ideal choice for both desktop and portable audio setups.

Technical Specifications

Driver Setup	Dual-driver configuration
Interface	Wired
Design	Rectangular enclosure

Application

Suggested Applications

- Desktop audio systems
- Portable audio applications
