

Stone Block Cutting Machine

This stone cutting machine is used in the construction and mining industries for cutting large blocks of stone into smaller sizes. It features a circular saw blade and a movable platform for positioning the stone.

Overview

Industrial Stone Block Cutting Solution

This stone block cutting machine is engineered for high-performance processing in construction and mining environments. Designed to transform large raw stone blocks into manageable, precise sizes, it features a robust circular saw blade system and an adjustable platform for optimal positioning. The integrated control panel ensures operator precision and safety, making it a versatile asset for various stone types.

Technical Specifications

Key Features

- High-precision circular saw blade
- Movable positioning platform
- Integrated control panel
- Multi-material compatibility

Model Identifier	G2S-1800-1200
Primary Applications	Construction, Mining, Stone Processing
