

Stone CNC Router for Engraving and Cutting

This stone CNC router is designed for high performance and cost-effectiveness. It is suitable for engraving, carving, and cutting various stone types, as well as metal and other materials.

Overview

Professional Stone CNC Router

This high-performance Stone CNC Router is engineered for precision engraving, carving, and cutting of various stone materials. Built with a seamless steel structure, the machine offers exceptional stability and resistance to deformation during intensive operations. Featuring a constant power spindle and imported linear square orbits, it ensures high-precision results and long-term durability for demanding industrial applications.

Performance Metrics

Spindle Power

3 kW

Constant Power

Technical Specifications

Durability Features

- Seamless steel structure
- Dustproof X and Z axes
- Heavy loading capacity

Motion System

Gantry Movement, Imported Ball Screw, Linear Square Orbit

Software & Compatibility

CAD/CAM Compatibility

- Type3
- Artcam
- Castmate
- Wentai

Forecasting Capability

Yes
