

Stone Granule Cleaning Machine

This stone cleaning machine efficiently removes impurities from granular materials. It features adjustable settings and a durable design suitable for continuous operation.

Product Overview

Professional Granule Cleaning Solution

The TQLQ50 Stone Granule Cleaning Machine is a robust and efficient solution designed for the effective removal of impurities from granular materials. Built for high-capacity, continuous operation, this machine is engineered for large-scale processing environments requiring consistent performance. Its intuitive design includes adjustable settings for precise cleaning intensity, ensuring optimal results for various material types and maintaining high levels of productivity.

Operational Features

Design Features

- Robust and durable steel frame construction
- Enclosed design for safe operation
- Multiple inspection ports for process monitoring
- Viewing window for real-time observation of the cleaning chamber

Maintenance

Easily accessible components, Low downtime design, Optimized for continuous operation

Control and Precision

Control Settings

Yes

Cleaning Intensity

Adjustable for precise material processing
