Product Overview

Comprehensive Store Management Solution

This SaaS-based store inspection software provides a centralized platform for operational visualization and standardized management. It enables multi-sectoral collaboration and remote oversight, allowing businesses to maintain high operational standards across multiple locations. By integrating various inspection modes and automated reporting, the system ensures a closed-loop management process from problem identification to rectification.

Inspection Modes

6 Inspection Modes

- The multiple inspect modes can help the inspectors/managers to inspect their store with high efficiency under most situations.
- The "To Do List" can improve the store management and make the store growth faster, and also can help manage store in closed-loop when issues are found during the inspection.
- The multiple data reports can help the enterprise managers to control their stores more efficiency and to understand the trend of all stores in details.

Random Insp.

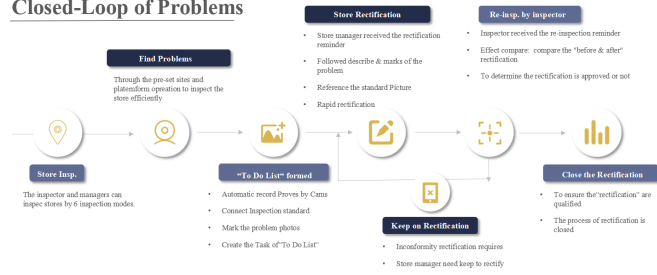

An overview of the system's six core inspection modes and the centralized dashboard for tracking store performance.

Available Inspection Modes

Live Inspection, Remote Inspection, Video Inspection, AI Inspection, Task-Preset Inspection, Random Inspection

Key Features

Closed-Loop of Problems

Visual representation of the closed-loop process for identifying, rectifying, and verifying store issues.

Operational Tools

- Real-time video monitoring
- Automated report generation
- Voice intercom guidance
- GPS-based arrival verification
- Intelligent image recognition
- Closed-loop task management
- Alarm center integration
- Multi-dimensional data reporting

Role Assignment

Role Assignment

Operation Inspector

Use the inspection system for inspection job, start the inspection with Inspection Item, record & grade, upload the stores' problem.

Store Manager

Execute self-inspection operations, receive Inspector inspection issues and respond to rectification, until the rectification is completed.

Company Executives

Initiate appraisal plans, review store inspection analysis reports, and optimize management systems.

IT Departemnt

Responsible for the open of the sub-account and stores in the system, infrastructure device operation and maintenance.
