

Storm Drain System - 5 km

This storm drain system spans 5 km and is designed for road improvement projects. It provides effective water management and helps prevent flooding.

Project Overview

Infrastructure Improvement Capabilities

This storm drain system solution is designed for large-scale urban infrastructure improvement projects, specifically focusing on expanding drainage capacity to meet future environmental and urban needs. The system is engineered to handle extensive civil works, providing robust water management infrastructure across significant distances. It is a proven solution for modernizing existing road and drainage networks to enhance urban resilience.

Project Details

Scope of Work

- Construction of storm drains
- Improvement to existing roads
- Drainage capacity expansion

Total System Length	5 km
Start Date	July 29, 2004
Completion Date	September 30, 2008
Key Service Areas	Cheung Chau Old Town, Lai Chi Kok, Mong Kok
