

Straight Liquidtight Conduit Connector

This straight liquidtight connector creates a secure and watertight connection between flexible metallic conduit and electrical boxes. Constructed from durable metallic materials, it provides mechanical protection and corrosion resistance.

Product Overview

Professional Liquidtight Connectivity

These straight liquidtight conduit connectors are engineered to securely bond flexible metallic and non-metallic conduits to electrical boxes and enclosures. Designed for efficiency, they slip on quickly to grip the conduit jacket, significantly reducing installation time while minimizing pullout risks. Constructed from durable zinc die-cast, they provide robust corrosion resistance and reliable performance in both wet and damp environments.

Technical Specifications

Included Components

- Sealing Washers
- Heavy-duty Locknuts

Connector Style	Straight
Material	Zinc Die-Cast
Key Features	Quick Installation, Reusable Components, Liquid-tight Seal, High Pullout Resistance

Application Environment

Suitable Environments

Wet Locations • Damp Locations • Corrosive Environments
