

Street Light Luminaires for High-Pressure Sodium and Compact Fluorescent Lamps

These street light luminaires are designed for use with high-pressure sodium and compact fluorescent lamps. They feature a robust housing with integrated heat dissipation fins and a clear lens for optimal light distribution.

Product Overview

Professional Street Lighting Solution

These street light luminaires are engineered for high-performance outdoor illumination, supporting both high-pressure sodium and compact fluorescent lamps. Designed with a robust housing and integrated heat dissipation fins, the units ensure long-term reliability and thermal management in demanding urban environments. The inclusion of a clear lens optimizes light distribution, while the secure mounting system facilitates efficient installation and routine maintenance for infrastructure projects.

Technical Specifications

Compatible Lamp Types	High-Pressure Sodium, Compact Fluorescent
Cooling System	Integrated heat dissipation fins

Design and Installation

Optical Lens	Clear lens for optimized distribution
Mounting System	Secure design for installation and maintenance

Application

Primary Applications

- Street lighting
- Public pathway illumination
- Urban infrastructure
