

Striking Face Box Wrench

The striking box wrench is designed for applying high torque to fasteners. It features a striking surface for use with a hammer or mallet, enabling the loosening of stubborn fasteners.

Product Overview

Industrial-Grade Striking Wrench

The striking box wrench is a heavy-duty hand tool engineered for high-torque applications where fasteners are difficult to loosen. Featuring a robust hardened steel construction, it includes a reinforced striking surface designed for use with a hammer or mallet to break free stubborn, corroded, or seized bolts. The closed-end, multi-point box design ensures a secure grip, significantly reducing the risk of slippage or fastener damage during demanding industrial tasks.

Technical Details

Material	Hardened Steel
Head Type	Closed-end, multi-point box design

Applications

Primary Industries	Construction, Automotive Repair, Manufacturing
--------------------	--

Key Features

Key Features

- Hammer-ready striking surface for high-force applications
- Hardened steel construction for extreme durability
- Secure multi-point grip to prevent fastener slippage
- Optimized for stubborn or corroded fasteners
