

Structured Cabling Network Communication Device

This network communication device is designed for structured cabling and network distribution. It features multiple network ports and communication interfaces, suitable for use in buildings or facilities.

Product Overview

Professional Network Communication Solution

This structured cabling network communication device is designed for reliable data distribution within professional facilities. Housed in a durable white metal enclosure, it provides organized connectivity for complex network infrastructures. The unit features multiple Ethernet ports and specialized BNC connectors, ensuring versatile integration for various data transmission requirements.

Physical Design

Mounting Style

Enclosed • Rack-mountable

Enclosure Material

White metal

Connectivity

Port Configuration

- Multiple Ethernet data ports
- BNC communication interfaces
- Integrated status indicator lights

Interface Types

Ethernet, BNC

Performance

Primary Applications

- Structured cabling systems
- Building network distribution
- Data transmission management
