

Sturdy Metallic Pressure Cooker with Safety Valves

This pressure cooker is designed for efficient and rapid cooking. It features a sturdy construction with safety valves and heat-resistant handles.

Product Overview

Professional Grade Pressure Cooking

This pressure cooker is crafted from a high-quality aluminum alloy, ensuring both structural durability and longevity in a professional kitchen environment. The unit features an advanced oxidation-treated surface that is highly resistant to scratches and abrasion. Engineered for reliability, it includes an eight-point protection system, providing peace of mind and enhanced operational safety for high-volume cooking tasks.

Material and Build

Material Composition	Aluminum alloy
Surface Treatment	Oxidation Surface, Scratch Resistant, Abrasion Resistant

Safety and Features

Core Protection Systems	8 points
Safety Valve System	Yes
Locking Mechanism	Secure locking system for safe operation

Ergonomics

Handle Material	Heat-resistant
