Submersible Centrifugal Sump Pump with Float Switch

This submersible centrifugal pump is designed for efficient water removal and transfer. It features a durable construction with a corrosion-resistant housing and a stainless steel strainer base, and is equipped with a float switch for automatic operation based on water level.

Overview

High-Efficiency Submersible Centrifugal Pump

This submersible centrifugal pump is engineered for reliable water removal and transfer in demanding environments. Constructed with a durable, corrosion-resistant housing and a stainless steel strainer base, it ensures long-term performance and protection against debris. The integrated float switch provides seamless automatic operation, making it an ideal solution for drainage, dewatering, and irrigation tasks.

Technical Specifications

Operation Mode	Automatic (Float Switch)
Pump Type	Submersible Centrifugal

Construction & Materials

Housing Material	Corrosion-resistant
Base Component	Stainless steel strainer

Applications

Primary Applications	Drainage, Dewatering, Irrigation
