

Submersible Deep Well Water Pump

This submersible deep well water pump is designed for efficient water extraction from deep wells. Its submersible design allows for quiet operation and protection from the elements, making it suitable for residential, agricultural, and industrial water pumping needs.

Product Overview

Reliable Water Extraction

The 100QJ10 is a robust submersible deep well water pump engineered for efficient water extraction from deep wells. Designed for durability in demanding environments, this unit ensures a consistent water supply for residential, agricultural, and industrial applications. Its submersible architecture provides quiet operation and superior protection against external elements, offering a long service life.

Key Features

Operational Benefits

- Quiet operation due to submersible design
- Protection from environmental elements
- Consistent water supply performance
- Durable construction for long service life

Suitable Applications

Residential, Agricultural, Industrial
