

Submersible Deep Well Water Pump

This submersible deep well pump is designed for efficient water extraction from deep wells. The multi-stage impeller system provides high pressure and flow rate, and the stainless steel construction ensures corrosion resistance and long-lasting performance.

Product Overview

High-Efficiency Submersible Deep Well Pump

This submersible deep well pump is engineered for reliable and efficient water extraction from deep underground sources. Featuring a robust multi-stage impeller system, it delivers high pressure and consistent flow rates suitable for demanding tasks. Constructed from durable stainless steel, the unit offers excellent corrosion resistance, ensuring long-lasting performance in various environments like irrigation, water supply, and residential or commercial pressure boosting.

Technical Specifications

Construction Material	Stainless Steel
Key Features	Corrosion Resistant, Multi-stage Impeller, High Pressure, High Flow Rate

Applications

Suitable Applications

- Agricultural Irrigation
- Water Supply Systems
- Pressure Boosting
- Deep Well Extraction
