

Submersible Deep Well Water Pump

This submersible deep well pump is designed for efficient water extraction from deep wells. Constructed with durable materials, it ensures longevity and resistance to corrosion.

Overview

High-Performance Submersible Extraction

This submersible deep well pump is engineered for efficient water extraction from deep sources. Built with durable, corrosion-resistant materials, it ensures long-term reliability in demanding environments. It features a high-performance motor and a multi-stage impeller system, providing optimal head pressure and pumping capacity for irrigation, domestic, and industrial applications.

Technical Specifications

Suitable Applications

- Agricultural Irrigation
- Domestic Water Supply
- Industrial Water Extraction

Key Features

Submersible, Corrosion Resistant, High-Performance Motor, Multi-stage Impeller, Quiet Operation

Installation

Engineered for easy installation and quiet operation.
