

Submersible Dirty Water Drainage Pump

This submersible pump is designed for the efficient drainage of water containing solid particles. It features a robust motor, float switch for automatic operation, and durable construction suitable for pumping water from flooded areas, construction sites, and ponds.

Overview

Reliable Dirty Water Drainage

This submersible dirty water pump is engineered for the efficient removal of water containing solid particles. Built for demanding environments, it features a robust motor and durable construction, making it an ideal solution for flooded areas, construction sites, and ponds. The integrated float switch ensures automatic operation, while the convenient hose connection allows for quick and easy setup.

Technical Specifications

Operation Mode

Automatic • Submersible

Key Features

- Robust motor design
- Float switch for automatic operation
- Durable construction for harsh environments
- Easy hose connection

Primary Applications

Flooded Areas, Construction Sites, Ponds
