

Submersible Drainage Water Pump

This submersible water pump is designed for drainage and irrigation applications. It features a cylindrical stainless steel housing with a vertical discharge pipe and is suitable for pumping clean or slightly dirty water in agricultural or residential settings.

Product Overview

Submersible Drainage Water Pump

This submersible drainage pump is engineered for efficient water management in both agricultural and residential settings. Designed with a robust stainless steel housing, it provides reliable performance for pumping clean or slightly dirty water. The unit features an integrated vertical discharge pipe and a user-friendly side outlet valve to ensure streamlined installation and operation.

Technical Specifications

Suitable Water Conditions

- Clean water
- Slightly dirty water

Design Features

Submersible • Vertical Discharge • Stainless Steel Housing

Housing Material

Stainless steel

Application Scope

Drainage, Irrigation, Agricultural, Residential
