

Submersible Electric Clean Water Pump

This submersible electric pump is designed for pumping clean or slightly dirty water. It features a stainless steel motor housing and pump body for durability and corrosion resistance.

Product Overview

Clean Water Submersible Pump

The QDX series is a robust submersible electric pump engineered for the efficient transfer of clean or slightly dirty water. Constructed with stainless steel components, it offers high durability and corrosion resistance for demanding agricultural, industrial, and building environments. The inclusion of a float switch ensures reliable automatic operation, making it ideal for basement drainage and general water management.

Operating Conditions

Maximum Immersion Depth	5 m
Maximum Fluid Temperature	40
pH Scope	4-10
Maximum Fluid Density	1200 kg/m ³

Features

Key Features	Stainless Steel Housing, Corrosion Resistant, Automatic Float Switch, Submersible Design
--------------	--

Applications

Suitable Applications

- Agricultural irrigation
- Industrial water transfer
- Building and construction sites
- Environmental protection systems
- Basement drainage
- Swimming pool maintenance
