

Submersible Electric Water Pump for Drainage and Irrigation

This submersible electric pump is designed for drainage, irrigation, and general water transfer. It features a durable motor and impeller, ensuring reliable performance in demanding environments.

Overview

Professional Submersible Pumping Solution

The QDX series submersible electric pump is engineered for versatile performance in drainage, irrigation, and general water transfer applications. Its robust construction integrates a durable motor and impeller designed to withstand demanding operational environments. Featuring an automated float switch to prevent dry running, this unit ensures both operational efficiency and equipment longevity for professional users.

Technical Features

Key Functional Features

Submersible Design, Automatic Float Switch, Compact Installation, High Flow Rate, Easy Maintenance

Operation

Automatic (Float switch equipped)

Applications

Primary Applications

- Agricultural Irrigation
- Water Drainage
- General Water Transfer
