Product Overview

Robust Submersible Performance

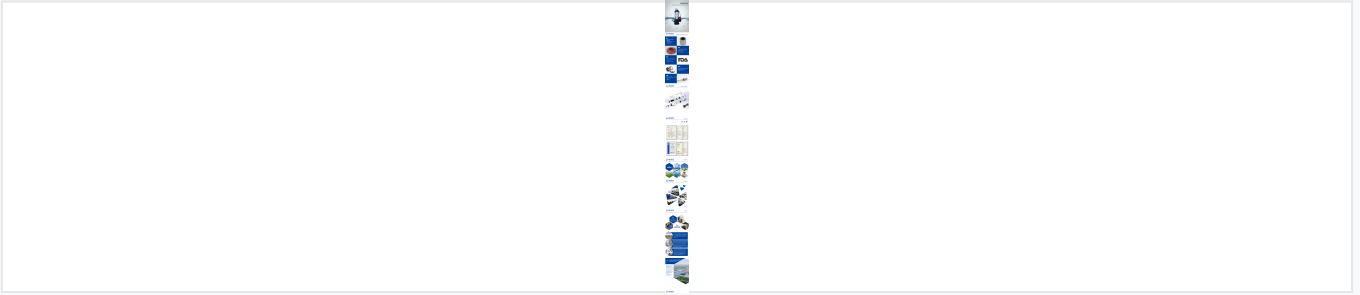

The DS Series Submersible Electric Pump is a reliable, high-performance solution designed for demanding dewatering and fluid transfer applications. Engineered with a durable stainless steel motor housing and a robust cast iron pump body, it offers excellent corrosion resistance and longevity. Featuring an integrated float switch for automatic operation and a powerful motor, this unit is built to handle challenging environments, including construction sites, basements, and industrial drainage systems.

Key Features

Core Features

- Automatic operation with float switch
- Stainless steel motor housing
- Durable cast iron pump body
- Integrated handle for portability
- Threaded discharge port for easy connection
- Suitable for solids and debris handling

Technical Specifications

Detailed technical breakdown of the pump's internal components, including the mechanical seal and rotor technology.

Key Components

- High-precision impeller
- Italy MTU mechanical seal
- High-precision rotor
- FDA standard filling oil

Construction Materials

Stainless Steel, Cast Iron, Cold-rolled Silicon Steel

Applications

Suitable Applications

Agricultural irrigation, Seep well water supply, Pressure boosting, Fire-fighting, Industrial application, Construction site dewatering, Basement drainage, Sewage treatment, Aquaculture

Certifications

Certifications

CE Certified
