

Submersible Electrical Water Pump for Irrigation

This submersible electrical pump consists of a water pump, sealing mechanism, and electrical motor. The pump is mounted on top of the motor and features a centrifugal design.

Product Overview

Submersible Irrigation Pump

This submersible electrical water pump is engineered specifically for high-efficiency water transfer in agricultural and drainage environments. Designed for direct placement into water sources, it simplifies installation while providing consistent performance for irrigation, dewatering, and wastewater management tasks. Its robust design ensures reliability for professional buyers seeking effective water management solutions.
