Product Overview

Professional Wastewater Management

The GNWQ series submersible sewage cutting pump is engineered for high-performance wastewater management in demanding environments. Featuring a specialized cutting mechanism, it efficiently macerates solids and fibrous materials to prevent system clogging. This robust design ensures reliable, long-lasting operation for industrial, commercial, and residential applications.

Technical Features

Anti-Clogging Technology

Cutting Impeller • Non-clogging Design

Material Durability

Heavy-duty construction for enhanced longevity in harsh wastewater environments.

Application Areas

Industry Suitability

Residential, Commercial, Industrial, Sewage Treatment Plants, Lift Stations
