

Submersible Sewage Pump for Construction and Mining

This submersible sewage pump is designed for use in construction and mining applications. It features a non-clogging impeller for pumping dirty water.

Product Overview

Rugged Submersible Performance

This submersible sewage pump is engineered for heavy-duty applications in construction, mining, and municipal wastewater management. Featuring a non-clogging impeller design and a robust cast iron housing, it ensures consistent flow and reliability under demanding conditions. The integration of high-grade materials like stainless steel and silicon carbide seals provides superior resistance to corrosion and wear in harsh environments.

Technical Specifications

| | |
|------------------|-----------------------|
| Housing Material | Cast Iron |
| Impeller Design | Closed non-clogging |
| Mechanical Seal | SiC/SiC |
| Shaft Material | SS304 Stainless Steel |

Components

| | |
|--------------|-----|
| Bearing Type | C&U |
|--------------|-----|

Applications

| | |
|----------------------|--|
| Primary Applications | Construction, Mining, Municipal Wastewater, Agricultural Drainage, Industrial Effluent |
