

Submersible Sewage Pump for Waste Water Transfer

This pump is suitable for transferring waste water. It is available in cast iron or stainless steel material and comes in single tube and double tube configurations.

Product Overview

High-Efficiency Submersible Sewage Handling

The YW series vertical sewage pump is engineered for robust waste water management, capable of handling dirty water, rainwater, and sewage containing solid grains or fibrous materials. Its specialized large-channel impeller design ensures superior drainage capacity and clog-resistance in demanding environments. Ideal for municipal works, industrial buildings, and large-scale facilities, this pump provides a durable and space-saving solution for fluid transfer.

Technical Specifications

Configuration Options	Single Pipe, Double Pipe
Impeller Structure	Large channel anti-clogging design
Installation Type	Vertical submersible

Key Applications

Application Sectors

- Municipal infrastructure
- Industrial buildings
- Hotels and hospitality
- Civil air defense
- Mining operations

Suitable Media

Waste Water • Sewage • Rainwater • Living Water • Solid-laden fluids
