

Submersible Sewage Pump for Wastewater Handling

This submersible pump is designed for handling wastewater and sewage. Its robust construction and solids-handling impeller ensure durability and prevent clogging in residential, commercial, and industrial applications.

Product Overview

Robust Wastewater Handling

The DSP submersible sewage pump is engineered for demanding wastewater and sewage management tasks. Featuring a durable, robust construction and a powerful motor, it ensures efficient operation in residential, commercial, and industrial environments. The specialized solids-handling impeller design minimizes clogging, while its compact footprint allows for seamless installation in confined spaces.

Key Features

Installation

Submersible • Compact Design

Applications

Sewage Transfer, Dewatering, Effluent Removal

Technical Details

Performance Focus

- High efficiency motor
- Durable construction for demanding environments
- Reliable long-lasting performance

Impeller Function

Solids-handling impeller designed to prevent clogging
