

# Submersible Sewage Water Pump

This submersible sewage pump is suitable for wastewater drainage in factories, construction sites, and municipal sewage treatment plants. It is also used in residential quarters, municipal projects, methane pools, and field irrigation.

## Product Overview

### Professional Wastewater Management

The WQ series submersible sewage pump is engineered for efficient and reliable wastewater removal in residential, commercial, and industrial settings. Featuring a robust cast iron body and stainless steel motor housing, this pump is designed to withstand harsh operating conditions and resist corrosion. It incorporates advanced safety features like a built-in thermal protector to prevent overheating and an automatic float switch for seamless water level management.

## Technical Specifications

### Insulation Class

Class B

### Protection Class

IPX8

### Motor Winding Material

Copper

## Construction & Materials

### Material Composition

Cast Iron Body, Stainless Steel Motor Housing, Stainless Steel Welded Shaft

## Key Features

### Main Operational Features

- Built-in thermal protector
- Automatic float switch for on/off operation
- Handles solids for effluent applications
- Includes hose adapter for easy installation
