

Submersible Solar Water Pump for Deep Wells

This submersible solar pump is designed for deep well applications. It is suitable for irrigation and domestic water supply where grid power is unavailable.

Product Overview

Sustainable Water Extraction

This submersible solar pump is engineered for efficient deep well water extraction in locations without grid power. Its robust stainless steel construction ensures long-term durability and resistance against corrosion in harsh environments. The system provides a reliable, cost-effective, and sustainable solution for various agricultural and domestic needs.

Core Applications

Suitable Applications

Irrigation, Livestock Watering, Domestic Water Supply, Remote Water Extraction

Technical Features

Construction Materials

- Stainless steel pump body
- Corrosion-resistant components

Power Compatibility

Solar Powered • Off-grid Ready

Model Designation

TPS200-HR
