

Submersible Sump Pump with Float Switch

This submersible pump removes water from sumps and basements. It features durable construction and a float switch for automatic operation, suitable for residential and light commercial use.

Product Overview

High-Efficiency Submersible Drainage

The Q1DP-E submersible sump pump is a robust solution engineered for reliable water removal in basements, sumps, and flood-prone areas. Featuring a durable construction and an integrated float switch, this unit provides fully automatic operation for both residential and light commercial environments. It is specifically designed to handle solids effectively, ensuring consistent performance and efficient drainage when you need it most.

Technical Specifications

Pump Category	Submersible Sump Pump
Operation Mode	Automatic with Float Switch
Solids Handling Capability	Yes

Application Suitability

Target Use Cases	Residential, Light Commercial, Basement Drainage, Flood Prevention
