

Submersible Utility Pump for Water Removal

This submersible utility pump is designed for general-purpose water removal applications. It features durable construction and an efficient motor, making it suitable for removing water from basements, pools, or other areas where unwanted water accumulates.

Product Overview

General Purpose Water Removal

The Q1CP-Series utility pump is a high-performance submersible pump engineered for efficient water removal across a variety of settings. Designed with durable materials and a robust motor, it is an ideal solution for clearing standing water from basements, pools, and low-lying areas. Its compact build ensures easy portability and straightforward operation for professional maintenance tasks.

Product Features

Key Attributes
