

Submersible Water Pump - 100QJH16

This submersible pump is designed for various applications and features a cylindrical stainless steel body. It is suitable for irrigation, water supply, and dewatering purposes.

Product Overview

Professional Submersible Water Pump

The 100QJH16 is a robust submersible pump engineered for efficient water extraction from deep wells, boreholes, and submerged environments. Constructed with a corrosion-resistant stainless steel body, it is built for longevity and reliable operation in demanding conditions. This versatile unit is ideally suited for agricultural irrigation, municipal water supply, and professional dewatering applications.

Technical Specifications

Model Number	100QJH16
Construction Material	Stainless Steel, Corrosion-resistant

Applications

Primary Applications

- Irrigation
- Water supply
- Dewatering
- Well and borehole extraction
