

# Submersible Water Pump

This submersible pump is designed for efficient drainage and irrigation. It features durable construction suitable for handling both clean and dirty water.

## Product Overview

### High-Performance Submersible Pump

The V750F is a robust submersible pump engineered for demanding drainage and irrigation applications. Its durable, corrosion-resistant housing ensures long-term reliability in both clean and dirty water environments. Equipped with a powerful motor and an automatic float switch, this unit provides efficient high-volume water transfer for agricultural, construction, and domestic use.

## Technical Specifications

### Suitable Applications

- Agricultural Irrigation
- Construction Site Drainage
- Domestic Water Transfer

Model Identifier	V750F
Key Features	Automatic Operation, Corrosion-Resistant, High-Volume Output

## Performance

### Compatible Water Types

Clean Water • Dirty Water
