

Submersible Water Pump for Air Conditioning Fans

This submersible water pump is designed for air conditioning fans and applications needing water circulation. It has a durable plastic housing, a screened inlet, and suction cups for secure mounting, with adjustable flow rates.

Product Overview

Compact Submersible Water Pump

This submersible water pump is engineered for reliable water circulation in air conditioning fans and similar applications. Designed for versatility, it features a durable plastic housing and a screened inlet to effectively prevent debris intake. With adjustable flow rates and secure suction cup mounting, it provides a customizable and stable solution for both indoor and outdoor environments.

Technical Specifications

Mounting Method	Suction Cups
Housing Material	Durable Plastic
Usage Environment	Indoor, Outdoor

Features

Key Features

- Adjustable flow rates
- Screened inlet for debris protection
- Submersible design
- Secure suction cup mounting
