

Submersible Water Pump for Dewatering

This submersible pump is engineered for effective water removal across diverse applications. Its robust engine, coupled with a flexible hose and durable pump head, ensures versatile fluid transfer.

Product Overview

Professional Dewatering Solution

The YPE-3"X6M is a high-performance submersible water pump designed for demanding fluid transfer tasks in industrial, construction, and agricultural settings. Engineered for reliability, it features a robust engine and durable pump head capable of efficient water removal in flooded areas or construction sites. The unit's compact, portable design is supported by a stable protective frame, ensuring it remains operational in rugged environments.

Technical Specifications

Pump Size	3 inches
Hose Length	6 m

Performance Features

Key Features

- Robust engine construction
- Durable pump head
- Portable protective frame
- Flexible hose included

Suitable Applications	Construction Dewatering, Flood Drainage, Industrial Fluid Transfer, Agricultural Irrigation
