Submersible Water Pump for Drainage and Irrigation

This heavy-duty submersible water pump is designed for drainage and irrigation. Its robust construction ensures reliable performance in demanding environments and is suitable for agricultural, industrial, and municipal water management, effectively pumping wastewater, sewage, and liquids containing solids.

Product Overview

High-Performance Submersible Solution

This heavy-duty submersible water pump is engineered for demanding drainage and irrigation tasks. Its robust construction ensures reliable performance in agricultural, industrial, and municipal environments. It is specifically designed to handle wastewater, sewage, and liquids containing suspended solids, making it a versatile tool for complex water management needs.

Applications & Use Cases

Suitable Applications	Agricultural Irrigation, Industrial Drainage, Municipal Water Management, Wastewater Handling, Sewage Systems

Technical Features

Handling Capabilities

- Wastewater processing
- Sewage pumping
- Liquid suspension handling

Construction Standard

Heavy-Duty Design • Corrosion Resistant • Industrial Grade
