

Submersible Water Pump for Interior Use

This submersible pump is designed for interior applications such as drainage and irrigation. The cylindrical pump, constructed from metallic material, features an outlet port at the top for water discharge.

Product Overview

QXNY Series Submersible Pump

The QXNY series submersible pump is engineered with an internal installation structure, ensuring superior cooling performance and long-term durability. Designed for high efficiency and energy savings, this unit features robust mechanical seals and a reliable motor assembly. It is an ideal solution for versatile water transfer needs in agricultural, architectural, and industrial settings.

Technical Specifications

Construction Features

- Integrated motor and pump assembly
- Internal installation structure for cooling
- Durable mechanical seals
