

Submersible Water Pump with Filter

This submersible water pump is designed for efficient water circulation and filtration. It features a durable plastic housing with integrated filter media for removing debris and impurities.

Product Overview

High-Efficiency Filtration and Circulation

This submersible water pump is designed to provide reliable water circulation and debris removal in various aquatic environments. Encased in a durable plastic housing, it features integrated filter media to ensure clear water quality for ponds, aquariums, and hydroponic setups. The unit offers user-friendly adjustable flow rates and includes versatile attachments for fountain or aeration applications.

Technical Specifications

Included Components

- Durable plastic housing
- Integrated filter media
- Vertical extension tube
- Nozzle attachment

Operational Features

Submersible • Adjustable Flow Rate • Filtration Included

Suitable Applications

Ponds, Aquariums, Hydroponic Systems
