

Submersible Water Pump with Float Switch

This submersible pump is a reliable solution for water removal needs. It features a float switch for automatic operation and durable construction for long-lasting performance.

Product Overview

Professional Drainage Solution

The Q1CP-E2 is a robust submersible water pump engineered for reliable water removal in residential and commercial environments. Equipped with an integrated float switch, it enables seamless automatic operation for applications such as basement drainage, pool maintenance, and construction site dewatering. Its compact and durable design ensures effective performance in tight spaces while maintaining high operational efficiency with minimal maintenance requirements.

Operational Features

Recommended Applications

- Basement drainage
- Swimming pool water removal
- Construction site dewatering

Operation Mode

Automatic, Submersible, Float Switch Controlled

Design Specifications

Design Advantages

Compact Size • Durable Construction • Low Maintenance
