

Submersible Water Removal Pump with Float Switch

This submersible pump is designed for various water removal applications. It features a float switch for automatic operation and durable construction for reliable performance.

Product Overview

Reliable Submersible Water Removal Solution

This submersible pump is engineered for efficient and automated water management in various environments. Equipped with an integrated float switch, it provides reliable, hands-free operation for tasks like draining flooded areas or emptying pools. Its durable construction ensures longevity and consistent performance for demanding professional and residential applications.

Key Features

Core Features

- Integrated float switch for automatic operation
- Submersible design for versatile water removal
- Durable construction for reliable performance
- High-efficiency water transfer capabilities

Applications

Primary Applications

Flooded area drainage, Pool maintenance, General water transfer
