

Submersible Water Removal Pump with Float Switch

This submersible pump is designed for various water removal applications. It features a durable construction and a float switch for automatic operation.

Product Overview

Reliable Water Management

The Q1DP-F is a high-performance submersible pump engineered for efficient water removal in diverse environments. Featuring a rugged, durable construction and an integrated float switch, it provides fully automatic operation for flood drainage, pool maintenance, and general liquid transfer. Its compact form factor ensures versatility, allowing it to function reliably even in confined spaces.

Technical Specifications

Design Advantages

- Compact footprint for tight spaces
- Durable heavy-duty construction
- Automatic float-activated switching

Operation Type	Automatic with Float Switch
Applications	Flood Drainage, Pool Maintenance, Water Transfer
